

Combretum schumannii
Family: Combretaceae

KWS: Mgurure, Mpera-mwitu, Mgongolo
GIR: Mgurure

Shrub or tree.

Used to make fish traps and for woodcarving. The bark and leaves are used medicinally.
Propagation from fresh seeds (remove wings first) and root suckers.

Larval host to Euproctis molunduana Aurivillius and Coeliades pisistratus
